## Laser Cutting Machines

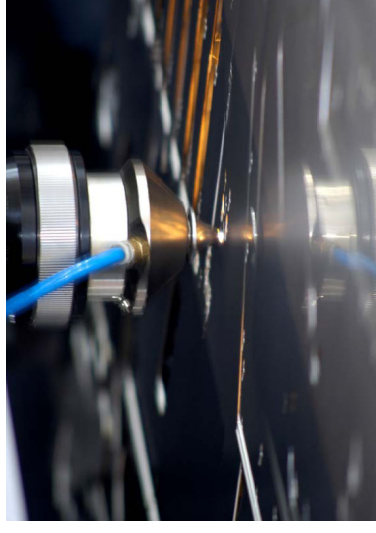

DURMA laser cutters offer great flexibility, efficiency, and accuracy. The high performance series utilises linear drive technology for unrivalled speed. The standard series utilises rack & pinion drive. The economical compact laser at 2500mm x 1250mm x 2.5Kw starts the range and the 6000mm x 2000mm x 4Kw bridge machine provides the solution to the heavy fabrication shop.

The Sinumerik 840 D CNC controller is an efficient 32-bit microprocessor system with an integrated PC. The controller has a Durma operator interface and a complete cutting database for all standard laser cutting applications

cncKad is the only system which has integrated CAD/CAM capabilities in the same module.

- The cutting head is equipped with a capacitive distance sensor which keeps the head at the optimal focusing position.

- Excellent beam quality is achieved with CO<sup>2</sup> slab laser unit.
