

DURMA

Using the Hypertherm power source, DURMA offers a range of high definition plasma cutters. The bridge construction ensures high performance cutting of mild steel, stainless and aluminium. The guide rails are independent from the work table thus load and unloading do not run the risk of impeding alignment.

Performance Plasma Cutting Machines

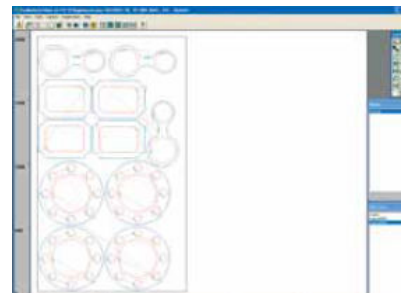

- Manual or automatic gas consoles

- Equipped with HPR 130 or HPR 260 Hypertherm high performance plasma source.

- Siemens 840DiSL CNC controller
- Several types of material, thickness cutting methods are loaded as default on Durma's own software.

- Library of common shapes
- Direct CAD .dxf file input
- Automatic nesting

- Optional torch break away system
